

18_SECURITY_EMERGENCY_RESPONSE_SOP.md — Security Emergency Response SOP

Scope: Rapid isolation, containment, cleanup, and recovery of compromised client web infrastructure.

1. EMERGENCY RESPONSE LIFECYCLE (5 PHASES)

Detect ■■> Contain ■■> Restore ■■> Harden ■■> Monitor

- 1. **Detect (Triage SLA):** Incident logged via emergency channel. Acknowledge and triage within SLA (1h Enterprise / 4h Growth / 12h Standard).
- 2. **Contain:** Quarantined server environment, reset administrative passwords, restrict database access permissions.
- 3. **Restore:** Scan core files against clean checksums, remove web shells/malware, sanitize database tables, re-install clean core.
- 4. **Harden:** Implement WAF rules, block malicious IP ranges, set strict file permissions (644 files / 755 directories).
- 5. **Monitor:** Submit Google Blacklist review requests, monitor security logs for 7 days post-incident.

2. EMERGENCY ESCALATION MATRIX & CONTACTS

Incident Severity	Initial Responder	Level 1 Escalation	Level 2 Escalation	Level 3 Escalation
---	---	---	---	---
Critical (Downtime / Breach)	Security Engineer	Security Lead (15m)	Operations Head (30m)	CEO / Founder (1h)
High (Malware Flag / Defacement)	Security Engineer	Security Lead (30m)	Operations Head (2h)	—
Medium (Suspicious Activity)	Security Engineer	Security Lead (2h)	—	—
Low (Header Warning)	Junior Engineer	Security Engineer (24h)	—	—
